Monocure3D®

Monocure 3D PRECISE+ Matte HD Dental Model Resin

PRECISE+ Matte HD dental resin is an easy-to-use, high-quality & pin-point accurate resin.

The Matte finish reduces surface gloss to minimise glare under lab and clinical lighting, making fine detail easier to see during assessment, scanning, and demonstration.

The smooth matte surface finish makes this a popular choice for orthodontics, diagnostics, prototypes, aligners and implant models.

This is the preferred resin choice by most dental labs due to its high-tensile strength once post-cured.

Monocure 3D GINGIVA Flexible Dental Resin

Embrace the natural look and feel of gum tissue in your dental models with Monocure3D's GINGIVA Flexible Dental Resin.

This innovative resin is specifically formulated to enhance implant workflows and produce dental models that accurately mimic the flexibility and appearance of natural gums. GINGIVA is a leap towards realism in dental modelling

Highly Elastic and Tear-Resistant: The elastic nature of this resin ensures high tear resistance, making the models durable and long-lasting, even under stress.

Easy Adjustability: Understanding the need for precision, GINGIVA can be easily adjusted via grinding, allowing for fine-tuning and customisation of dental models to meet specific requirements.

Monocure 3D GUIDE Bio-Compatible Dental Resin

The GUIDE biocompatible dental resin is a 3D printing resin meticulously engineered for the fabrication of high-quality surgical guides.

This specialised resin is essential for dental professionals, combining safety, precision, and functionality in implant-guided surgeries.

GUIDE biocompatible dental resin is a critical component in advanced dental care.

Biocompatible Class I Certified: This transparent resin is certified as a biocompatible Class I material, meeting stringent safety standards for intraoral use.

High Tensile Strength and Transparency.

Odourless and Tasteless.

High Heat Resistance & Sterilisable: GUIDE resin is highly heat-resistant and can be sterilised using standard autoclave protocols, maintaining hygiene and safety standards.

Monocure 3D STUDY Dental Resin

STUDY™ Dental Model Resin is a high-precision resin engineered for 3D-printed dental applications, including diagnostic models, case planning, and orthodontic study casts.

Designed for dimensional accuracy, smooth surface finish, and durability, it ensures consistent, high-quality results.

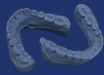

Gypsum-Like Matte Finish – The opaque colour and matte surface texture replicate traditional gypsum models, enhancing visual and functional aspects.

Exceptional Accuracy & Detail – Print with layer heights from 100 to 10 microns, capturing sharp details and delicate contours crucial for dental professionals.

Monocure 3D PLATEBOND Plate Adhesion Promoter

PLATEBOND™ is a UV-cured build plate adhesion promoter developed to ensure reliable first-layer adhesion for resin 3D printing.

Whether you're printing large models, working with an older build plate, or experiencing first-layer issues, PLATEBOND™ helps reduce warping, lifting, and separation.

It's compatible with all Monocure3D resins and other UV-cured photopolymer systems, and works across MSLA, LCD, and DLP printers.

Apply a thin, even coat to a clean build plate before printing. Once cured during the first exposure, it forms a strong, consistent bond between the model and the plate, so your prints stay exactly where they should.

Monocure 3D RESINAWAY Resin Cleaner

Monocure3D RESINAWAY® is the original and trusted UV resin cleaning solution, designed to simplify post-processing while delivering exceptional cleaning performance.

Specially formulated for 3D printing resins, it provides a safe, non-flammable, long-lasting, and cost-effective alternative to traditional solvents like IPA.

No Cracks, Cloudiness, or White Residue: Leaves prints with a smooth, clean finish and retains clarity.

Multi-Purpose: Cleans prints, build plates, vats, and tools with ease.

Monocure 3D RINSEOFF Final Rinse Solution

NEW!

RINSEOFF is a high-performance final cleaning solution designed to work after ResinAway®. Before curing, it ensures resin 3D prints are entirely free of sticky or oily residue.

This low-evaporation, non-flammable formula leaves a clean, smooth surface without water or alcohol.

Compatible with all Resin 3D Printers: Works with SLA, DLP, and MSLA prints

Metrodent Metrowax No. 2 Modelling Wax

Metrowax No.2 is a carefully formulated blend of paraffin and microcrystalline waxes.

It offers excellent handling and reliable dimensional stability throughout dental production. Its balanced composition allows precise carving, layering and contouring. This makes it ideal for detailed occlusal work and full prosthetic modelling.

The original pink colour provides strong visual contrast. This helps improve accuracy during sculpting and reduces errors. Metrowax No.2 has a long heritage of over 80 years, and remains trusted by dental technicians for its consistent performance and ease of use.
