RESOPREN® SUTURES

STERILE

NON-ABSORBABLE MONOFILAMENT SUTURES

Resorba Resopren® sutures are premium blue monofilament threads made from polyvinylidene difluoride (PVDF).

Designed for exceptional performance, these synthetic sutures are hydrophobic, chemically inert, and highly resistant to ageing, ensuring durability and reliability in surgical applications.

WHY CHOOSE RESORBA RESOPREN SUTURES?

- ✓ **Hydrophobic, Flexible and Elastic:** Provides excellent handling and knot security during suturing
- ✓ **Excellent Tissue Passage:** Smooth surface minimises tissue trauma, promoting faster healing
- ✓ **Extremely Supple:** Offers superior pliability for precise and comfortable suturing
- ✓ **Chemically Inert:** Minimises adverse tissue reactions
- ✓ **Highly Resistant to Ageing:** Maintains strength and integrity over time for long-term wound security

PROPERTIES

- **Colour:** Blue
- **Chemical name:** Polyvinylidene difluoride
- **Thread diameter:** USP 7-0 – 2 (0.5-5 metric)
- **Types of packaging:** Needle-thread-combinations
- **Sterilisation method:** Ethylene oxide

- Adaptable – dry or wet
- Strong – easy to suture
- Cross-linked – for desired barrier function
- Cuttable – size or shape can be adjusted with scissors

Easy to use
on both sides

PRODUCT DESCRIPTION

RESORBA® EasyFlex is a resorbable membrane made from porcine dermis-sourced collagen, aimed for guided bone and tissue regeneration (GBR & GTR).

Due to its substantially proven biocompatibility and low immunogenicity, porcine has been used in a variety of maxillofacial procedures for many years.

KEY INDICATIONS

RESORBA® EasyFlex is a resorbable membrane. It is intended for use in periodontal/dental surgery procedures, for placement in areas of periodontal defect, dental implant, bone defect or ridge reconstruction; to support wound healing post surgery.

RESORBA® EasyFlex is intended to create a physical barrier at the surgical site to prevent the colonisation of the underlying bone

RESORBA® EasyFlex is a cross-linked collagen membrane that combines a predictable resorption time and flexibility. Providing the desirable barrier durability for 12 weeks.

site by soft tissue cells (connective and epithelial) for 12 weeks while allowing the diffusion of biological fluids. As the membrane is naturally resorbable, there is no need for a second surgical intervention to remove it. The total resorption time is 24 weeks.

RESORBA® EasyFlex is recommended for use with a bone graft material to promote new bone healing.
