Zhermack Zetalabor Laboratory Putty

Zetalabor **condensation silicone** is characterised by **high hardness** and **good mechanical properties**. Zetalabor is **recommended** for counter-moulds in removable prosthesis applications, masks for creating artificial gums (indirect technique), moulds for preparation self-curing resins and many more applications.

Resistant to heat up to 100 degrees C.

Good precision.

80 Shore A hardness.

Detail Reproduction: 20 micron

Elastic Recovery: 98%

Strain in Compression: < 2%

Linear Dimensional Change
(after 24h): 0.25%

Monocure3D® PRECISE+ Matte Dental Model Resin

PRECISE+ Matte HD dental resin is an **easy-to-use**, **high-quality** & pin-point **accurate**.

The **Matte finish** reduces surface gloss to minimise glare under lab and clinical lighting, making **fine detail easier to see** during assessment, scanning, and demonstration.

The smooth matte surface finish makes this a **popular choice** for orthodontics, diagnostics, prototypes, aligners and implant models. This is the preferred resin choice by most dental labs due to its high-tensile strength once post-cured.

VOCO

V-Print Model 3D Printing Resin

Light Curing resin for the production of dental models.

Precision models for any type of dental need, including but not limited to:
Functional crown and bridge models;
Diagnostic models; Cast models for thermoforming aligners or other appliances;
Orthodontic models; Implant models.

No shaking required:
V-Print Model is always immediately usable, with no sedimentation separation or need for mixing.

V-Print Try In 3D Printing Resin

VO6049
1kg, Beige

\$509.85

Light-curing resin for the **generative production of try-ins for prosthetics**.

Indications: Try-ins for full and partial dentures; Transfer and grinding templates; Correction and occlusal impressions.

Advantages:
Advance checks - Verifying and adapting the fit, occlusion, function, phonation and aesthetics before the permanent denture is fabricated

VOCO**Grandio Discs Nano-Ceramic Hybrid CAD CAM Discs**

Low and High Translucency
15mm
Shades A1 - C2

\$793.10

Highest filler content (86% w/w).

Resembles natural teeth perfectly.

Excellent physical values for flexural strength and abrasion.

No firing required.

Can be processed using any conventional milling unit.

Can be **polished** and **repaired optimally**.

Ideal for milling even in cases with thin edges.

Based on the nano-hybrid technology.

YAMAHACHI**CAD CAM Open Type Milling PMMA Disk**

Yamahachi Dental PMMA Disks are indicated for **temporary crowns and bridges**, model **frameworks** for casting, and **denture production**.

Available in shades:

A1, A2, A3, A3.5, A4, B1, B2, B3, B4, C1, C2, C3, C4, D2, D3, D4, W (W0.5), CL (Clear), V-PINK.

Pack of 5

\$236.25

Indications: Crowns, inlays, onlays, veneers, implant supported crowns.

86% filled for enhanced strength and excellent wear resistance.

Tooth-like elasticity and **thermal expansion** allows for thinner crown margins.

Natural esthetics with enhanced **colour stability** and **polish retention**.

No firing or glazing required, reducing steps and saving time for true one-appointment dentistry.

Easy intraoral polishability, characterisation and repair.

YAMAHACHI**CAD CAM Open Type Milling Dual Colour PMMA Disk**

Yamahachi Dental PMMA Disks are indicated for **denture production**, **copy dentures**, and **temporary dentures**.

Available in shades: A1, A2, A3, A3.5, A4, B2, C2
